STEPS TO KEEP
FEET HEALTHY

Community & Care

IN THE TIME OF COVID-19

In this issue of our community magazine, I'd like to emphasize the word **community**. These are unprecedented times, and although we may be in uncharted waters, I'm inspired by the sense of community this experience has fostered in us all.

HEALTHCARE HEROES

First, I'd like to express my sincere pride in our employees and medical staff for their efforts in recent months. These medical professionals have truly answered the call to care for the sick and comfort alarmed families as the pandemic has evolved. They are true heroes, who stepped up to serve on the front lines of the COVID-19 response. I applaud and thank them for their dedication.

OUR AWESOME COMMUNITY

I would also like to recognize our community. The outpouring of support you showed our team was overwhelming. Whether providing comforting meals for staff, making masks, sending cards and prayers to team members, or just staying home to protect our community — we are so grateful for everyone doing their part and pulling together during this crisis.

RESTRUCTURED FOR THE FUTURE

As you've heard by now, our parent organization also did its part to help ensure we could continue providing services for you and your family by restructuring its debt. This was good news for our hospital and our employees. It allows us to continue providing patient care. As a current or former patient, you may have

received a legal notice by mail. We regret any confusion that this required notification may have caused. The restructuring is concluded, and we are ready to serve you now and into the future.

A NEW WORLD FOR CARE

But rest assured, our Emergency Room is open, safe and ready to provide care for emergencies like heart attacks, strokes and broken bones. We always urge you to dial 911 in an emergency situation and don't delay going to the ER. We've established safety measures, such as separate care areas, new cleaning procedures and protective equipment guidelines to align with guidance from the Centers for Disease Control and Prevention.

And finally, we remind you that in-person appointments are available again at physician offices. You can rest easy knowing these physician offices have adopted additional precautions to help keep you safe when you come in for your appointment. Of course, virtual visits are still available via our telehealth options. Just call your physician's office or visit [MesaViewAnytime.com](https://www.mesaviewanytime.com) to book an appointment.

Thank you for caring for us, as much as we care for you. It is our privilege to serve you.

Sincerely,

Ned Hill

Chief Executive Officer
Mesa View Regional Hospital

AN EQUAL OPPORTUNITY EMERGENCY

Otherwise known as a “brain attack,” a stroke can affect men and women of any age.

When the word stroke comes to mind, you may think of a medical emergency that occurs later in life. However, this cerebrovascular event, which occurs when the flow of blood to the brain is blocked, can happen to seemingly healthy individuals in the prime of life. The consequence can be brain damage, long-term disability or even death, as we witnessed when a relatively young Hollywood actor succumbed to a stroke during the last year.

TAKING ACTION

The first step to protect yourself from the consequences of stroke is to understand the risk factors. These include diabetes, family history, heart disease, high blood pressure, obesity and smoking. African Americans are also at greater risk for stroke. If you have any of these risk factors, take extra care to reduce your likelihood for experiencing a stroke. Specifically, try to:

- choose foods that are low in saturated fat and sugar

- exercise regularly
- keep blood pressure and cholesterol under control
- maintain a healthy weight
- manage stress
- stop smoking

You may also speak with your healthcare provider about whether medications may be needed to manage your risk factors.

RECOGNIZING STROKE

Even if you and your loved ones are following guidelines for a healthy lifestyle, you are still at risk for stroke. If you suspect that a stroke is occurring, think through the FAST checklist. Stroke may cause:

- Face drooping
- Arm weakness
- Slurred speech

If you notice any of these symptoms:

- Time to call 911

The faster a medical professional treats stroke, the more positive the outcomes will be.

MAKE EVERY SECOND COUNT

Time is extremely critical when dealing with a possible stroke. Your local emergency medical services (EMS), Mesquite Fire & Rescue and the Mesa View Regional Hospital Emergency Department work closely together to provide the most timely and effective possible care to patients in the communities they serve. The EMS staff is trained in critical care and the ER physicians at Mesa View are experienced with diagnosing and treating stroke patients.

When bad things happen, it's good to know you're close to a hospital and ER with advanced technology and lifesaving techniques. We're staffed by doctors and a team of nurses and techs whose skill with medicine is matched only by our compassion for patients. The bad news is, life isn't perfect. The good news is, the right care is right here.

Don't second-guess your health. In an emergency, our skilled physicians, experienced nurses and compassionate care team are here when you need them.

When experiencing the symptoms of a stroke, time is critical. Dial 911 to quickly get to the nearest ER for diagnosis and treatment. For more information about our ER and a list of other symptoms you should not overlook, visit MesaViewHospital.com, then click on our 30-Minute ER Pledge.

We work diligently to have you initially seen by a medical professional within 30 minutes of your arrival in the ER.

MAKE YOUR HOME A

Wellness Retreat

In times of crisis or this new normal, having a home that makes you feel calm and inspired is critical to mental and physical well-being. Take time to turn your living space into a retreat by transforming ordinary rooms into functional areas where wellness will thrive.

COOK UP A HEALTHY KITCHEN

When you are preparing delicious and healthy meals, you want the preparation and final products to be as safe as possible. Your kitchen is a routine stop on that path to wellness, so keep the following tips in mind as you outfit the room where your family meals are made and enjoyed.

FILTER YOUR WATER.

Keeping water that tastes crisp and clean is a refreshing way to encourage yourself to stay hydrated. Further purifying your water may be beneficial if you have a weakened immune system or another health condition, according to the Environmental Protection Agency. To ensure that your water is as pure as possible, invest in a water filtration system designed to remove contaminants.

CONSIDER YOUR CLEANING SUPPLIES.

EPA-approved disinfectants are effective choices to clean household surfaces and prevent the spread of germs and viruses, such as the flu or COVID-19, according to the Centers for Disease Control and Prevention. Wear disposable gloves while cleaning. Focus on high-touch areas, including tables, doorknobs, light switches, handles, keyboards, remotes and touch screens. For the list, visit [epa.gov](https://www.epa.gov), search for SARS-CoV-2 and choose "List N."

SET THE STAGE FOR LUXURIOUS REST

Your bedroom can make or break your ability to rest. Everything from lighting to temperature to the thread count of your sheets plays a critical role. As you design your dream space, the National Sleep Foundation recommends you:

CHOOSE DIMMABLE LAMPS. Lowering the lights before bed will signal to your brain that it is time to rest. Covering your windows with blackout curtains or shades can also block out early morning light or the glow of street lamps.

INDULGE YOUR SENSE OF SMELL. An essential oil diffuser or eye pillow filled with lavender may help you relax. This scent may also enhance mood and reduce blood pressure and heart rate.

PAMPER YOURSELF WITH COZY BEDDING. Take time to try out different blankets, mattresses and pillows to find the right fit.

MAKE ROOM FOR MEDITATION AND MOTION

Taking care of your body and mind through stress-reducing activities is essential to heart health, according to the American Heart Association (AHA). Practicing meditation may reduce blood pressure and the risk of heart disease, while exercise may help you manage everything from blood sugar to cholesterol to weight. Encourage your family to spend time on practices by dedicating a corner or a whole room. Keep things simple, outfitting the area with a few key items:

Exercise ball — Develop your core and your balance with an oversized ball. Simply sitting on the ball helps develop your proprioception, or the awareness of where your body is in space and time, while also strengthening your abdomen, back and pelvis. Additionally, the ball is a great tool to strengthen your arms and legs.

Yoga mat — Available in a wide price range, a mat is the perfect place to practice poses that will enhance your strength, balance and flexibility while also boosting your concentration and focus. Your mat can double as a spot to sit on for your morning meditation routines, which may include deep breathing exercises, gratitude affirmations and mindfulness practices.

Resistance bands — Get your two days per week of strength training recommended by the AHA without touching heavy weights or machinery. Resistance bands are easy to store and offer a variety of options to tone your muscles and improve your metabolic rate.

GO FOR GLASS. Clear, sturdy mason jars are a chic alternative to plastic that can make a healthy statement in your kitchen. These storage containers may be used to display fresh flowers on your table, serve fresh orange juice in the morning or store guacamole and colorful fruit salad.

Your primary care provider (PCP) can help you develop a wellness plan for a healthier life. To find a PCP, visit MesaViewMedical.com or book your own appointment at MesaViewAnytime.com.

Where the Germs Are

Your home is your sanctuary — but it may not always be the cleanest place to be. For example, surfaces in your bathroom and kitchen that are frequently damp and/or warm may also be home to bacteria, such as salmonella and E.coli, which may indicate the presence of fecal contamination, according to NSF International. Other common areas where this type of bacteria may be found include:

- bathroom faucet handles
- kitchen sinks
- counter tops
- toothbrush holders
- cutting boards

To clean these surfaces effectively, begin with soap and water to wipe down and remove grime from surfaces. Follow up with a sanitizing spray or cloths to kill lingering germs.

Choose sanitizers that are not in concentrated form and never spray them near children. If you elect to use a cleaner containing bleach, make sure the cleaner is not concentrated and never mix it with ammonia — a blend that can create a poisonous gas, according to the American Academy of Pediatrics (AAP). Further, the AAP recommends storing all cleaners, sanitizers and disinfectants in containers with clear labeling in a secure place to protect children and pets.

QUIT YOUR BELLYACHING

Abdominal pain is one of the most common reasons adults visit the emergency room, according to the Centers for Disease Control and Prevention. Learn more about abdominal pain you should not ignore.

APPENDICITIS

The appendix is a small organ attached to the intestines in the lower right portion of the abdomen, and its function is unknown. Blockage or inflammation in the appendix can cause severe pain called appendicitis, which, if left untreated, can cause the appendix to burst.

Appendicitis pain:

- begins near the belly button and moves toward the lower right
- gets worse when you move, cough, sneeze or take a deep breath
- occurs suddenly and worsens over a few hours
- may be accompanied by nausea, vomiting, diarrhea or constipation, fever, and abdominal swelling

Appendicitis is a medical emergency in need of immediate care. In most cases, surgery to remove the appendix is required.

GALLBLADDER

The gallbladder is a small organ located in the upper abdomen. It collects and stores bile, a fluid that helps digest food. Tubes called bile ducts carry bile to and from the gallbladder.

Gallstones are small, hard deposits made primarily of cholesterol. Most gallstones do not cause any symptoms, but some gallstones move into the bile duct and get stuck. This causes severe pain known as a gallbladder attack.

Gallbladder attack pain:

- begins suddenly and lasts for 30 minutes or more
- starts on the right side of the upper abdomen and may move to the upper back
- worsens after eating, especially fatty or greasy foods

If you experience gallbladder attack pain, make an appointment with your physician. If symptoms last longer than 5 hours and you have other symptoms, such as nausea or vomiting, seek immediate care. According to the Society of American Gastrointestinal and Endoscopic Surgeons, most patients return to normal activities in a week after laparoscopic gallbladder removal surgery.

HERNIA

A hernia occurs when an organ or other tissue pushes through a weakened area of muscle, usually in the abdomen. The most common symptom of a hernia is a bump under the skin that may or may not be sore.

Over time, the herniated tissue can become stuck in the hole in the muscle, resulting in severe pain and swelling. Surgery is the only way to permanently repair a hernia.

EXPERIENCED AND COMPASSIONATE, DR. KIM CARES!

Soon O. Kim, M.D.

With more than 25 years as a surgeon, Soon O. Kim, M.D., is experienced in a range of surgical procedures including colonoscopy, gastrointestinal surgery, gallbladder surgery, appendectomy, hernia repair and endoscopic surgery. She prefers the laparoscopic method of surgery when appropriate, as this approach is less invasive and more likely to produce a cosmetically positive result.

Dr. Kim is now welcoming new patients of all ages at Mesa View Medical Group, 1301 Bertha Howe Ave., Suite 8, in Mesquite. She can be reached by calling (702) 346-1700.

To make an appointment with a provider who can diagnose your stomach troubles, visit MesaViewMedical.com.

Dr. Kim is a member of the medical staff at Mesa View Regional Hospital.

If you are experiencing abdominal pain, don't wait to seek help; see Soon O. Kim, M.D. Visit MesaViewAnytime.com, click "Schedule an Appointment Now" then "Specialty Care" or call (702) 346-1700 to schedule an appointment that works for you.

STEP UP FOR YOUR FEET

You depend on your feet, so take steps to keep them healthy.

PRESCRIPTION FOR RELIEF

Here's what you can do at home to treat three common foot conditions.

CORN.

Soften this tough area of skin by soaking in warm water and applying lotion.

ATHLETE'S FOOT.

Treat this fungal infection with an over-the-counter anti-fungal cream.

FOOT SCAN

It's important to check the condition of your feet regularly, especially if you have diabetes.

Scan your feet from toes to heel for:

BUNION.

Wear shoes that give your toes plenty of wiggle room, apply ice a few times daily and cushion the bony bump on your outer big toe with bunion pads.

Your primary care provider can help you keep your feet healthy or refer you to a podiatrist for more care. Visit MesaViewAnytime.com or call (702) 346-0800.

FIND THE RIGHT FIT FOR FITNESS

Here's how to choose footwear to suit your preferred form of exercise.

CYCLING. You want a close but comfortable fit with padding for the ball of the foot.

HIKING. Look for plenty of tread and stability all around, especially for the ankle.

RUNNING. The less arch you have, the more cushioning and stability you'll want for your mid-foot.

WALKING. Prioritize shock absorption and arch support.

Could your discomfort be caused by a hernia?

If you experience a heavy feeling in your abdomen when you bend, pain when you lift heavy objects, or a lump that enlarges when you strain and disappears when you lie down, it could be a hernia. Some hernias with few symptoms may just need monitoring by your primary care physician. Those with more serious symptoms may need treatment. At Mesa View Medical Group, we provide surgical repair for all types of hernias. So don't wait.

Same-day consultations are often available.
